How to install Turbo C++: Compile and Run a C Program
Code::Blocks Tutorial

THE
C
PROGRAMMING
LANGUAGE

Today Agenda

- **Compilers & IDEs**
- **Turbo C compiler**
- **Test one example**
- **Data type and Arithmetic Operations**

NOTICE

- Along with this PPT there is clip
please watch that clip carefully

Types of Translator

There are 3 types of translator:

Compiler

Converts the whole code into one file (often a .exe file). The file can then be run on any computer without the translator needing to be present.
Can take a long time to compile source code as the translator will often have to convert the instructions into various sets of machine code as different CPUs will understand instructions with different machine code from one another.

Assembler

This type of translator is used for Assembly Language (not High Level Languages).
It converts mnemonic assembly language instructions into machine code.

Interpreter

Converts the source code into machine code 1 line at a time. Program therefore runs very slowly.
Main reason why an interpreter is used is at the testing / development stage. Programmers can quickly identify errors and fix them.
The translator must be present on the computer for the program is to be run

Translators

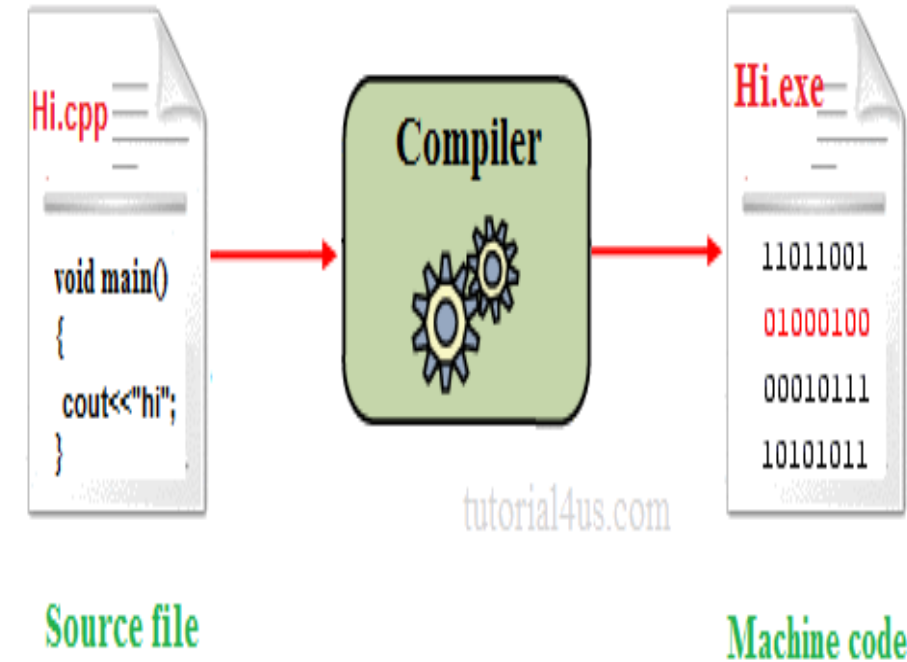

Compilers
Interpreters

Assemblers

C Compilers & IDEs

- First thing you need to understand is that computer (Machine) can only understand Machine language (Stream of 0s and 1s).
- In order to convert your C program source code to Machine code, you need to compile it. Compiler is the one, which converts source code to Machine code. In simple words you can say that a compiler converts human readable code to a machine readable format

Difference between an IDE and Compiler

IDE — Integrated Development Environment

So what is an IDE?

an IDE is the software that helps you write your code, provide code completion, code suggestions and those other neat stuff. Yep that's what you call an IDE.

Compiler

It too is a software or program. But it doesn't do the neat stuff that the IDE does but it is very important. Without it your IDE won't be able to produce the runnable programs from the source codes you write. What a compiler does is it takes the source code that you write and converts it to machine code or some other low-level language (such as assembly code). If you want a formal definition:

From wikipedia:

The name "compiler" is primarily used for programs that translate source code from a high-level programming language to a lower level language (e.g., assembly language or machine code). The most common reason for wanting to transform source code is to create an executable program.

Short answer: a compiler is a part of an Integrated Development Environment (IDE) more specifically the program that takes the source code, written for some programming language, and creates the run-time. Years ago it was machine code directly executed by hardware, now it could also mean some intermediate byte-code (for languages working in a virtual machine like Java family), or even source code itself for script like languages (python, perl, ruby, etc.) byte-code will be generated on first run.

IDEs and Famous IDEs

- Integrated Development Environment
- They have all the tools integrated
 - Editor
 - Compiler
 - Debugger
 - [Publisher]
 - [Documentaries]

Famous IDEs

- Microsoft Visual Studio 2005
- Dev-Cpp 5
- Emacs/Vim + gcc + gdb
- Eclipse IDE 3.2
- Borland Turbo C / C++ Builder
- Metrowerks CodeWarrior \
- KDeveloper

Famous Compiler + Debugger

- Microsoft C/C++ compiler [cl.exe]
 - Old microsoft QuickC + Microsoft C/C++
- GNU GCC – G++ Compiler | gdb 3.2 , 4.0 [Win, Linux, Unix, Solaris]
- Intel C/C++ compiler [Win, Linux]
- Borland TurboC / C Compiler 5.6.4 [Windows] + Kylix 3.0 [Linux]
- Watcom C, Open Watcom
- Apple GCC 3.3, 4.0 on Mac OS X.
- HP C++ for Tru64 UNIX 7.1.
- Metrowerks CodeWarrior 9.5 [OS X, Windows]

Turbo C : Step by Step Guide

- Made by Borland
- Small & Easy but inefficient
- For DOS, although it runs under windows too.
- The borland company was bought by Microsoft, nowadays a new version of C++Builder has been released.

Install Turbo C : Step by Step Guide

Step 1:

Locate the TC.exe file and open it.

You will find it at location **C:\TC\BIN**.

Step 2:

File > New (as shown in above picture) and then write your C program

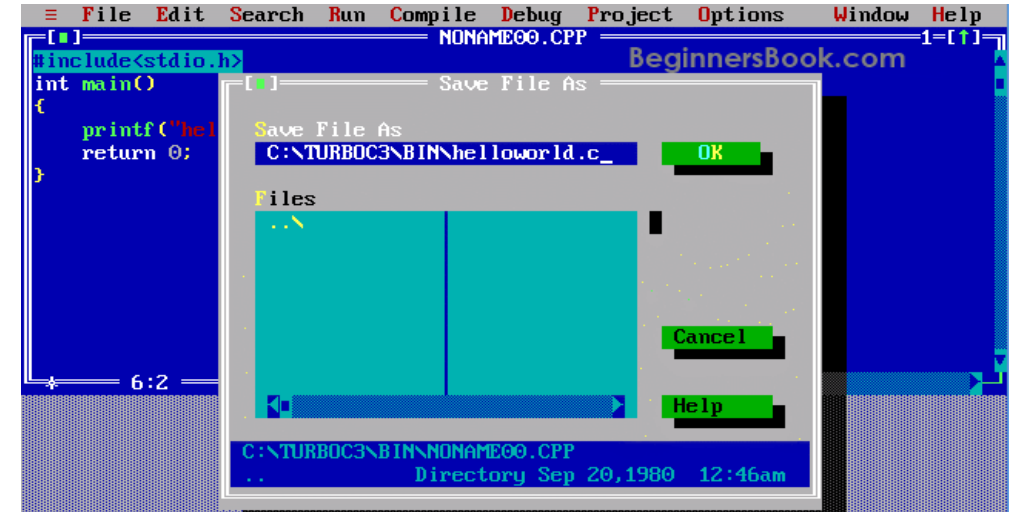

```
#include<stdio.h>
int main()
{
    printf("hello World!");
    return 0;
}
```

Install Turbo C : Step by Step Guide

Step 3:

Save the program using F2 (OR file > Save), remember the extension should be “.c”.

Step 4:

Compile the program using Alt + F9 OR Compile > Compile (as shown in the below screenshot).

Install Turbo C : Step by Step Guide

- **Step 5:**

Press Ctrl + F9 to Run (or select Run > Run in menu bar) the C program

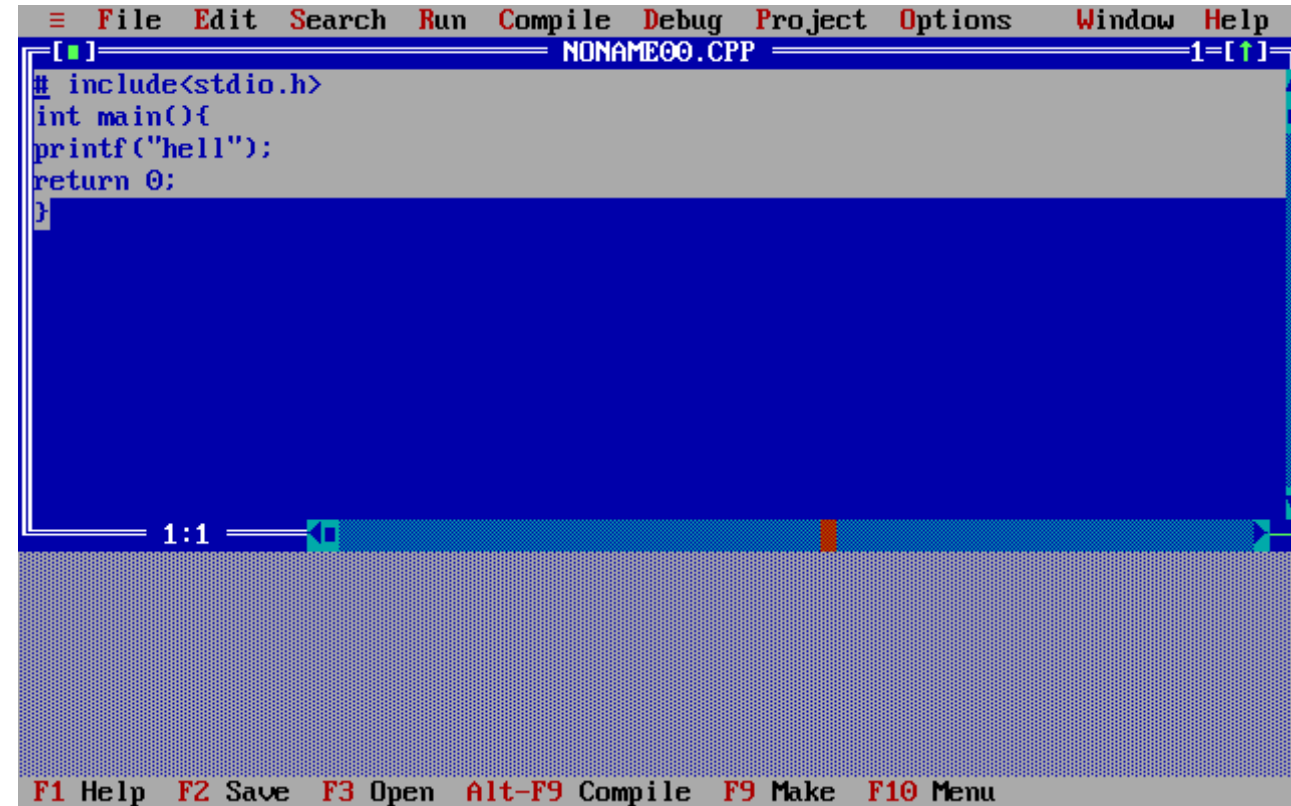

Step 6:

Alt+F5 to view the output of the program at the output screen.

NOW Let us try this code

```
# include<stdio.h>
int main()
{
    printf ("HI JIAXNI.....");
    return 0;
}
```

The screenshot shows a C programming IDE window titled "NONAME00.CPP". The menu bar includes File, Edit, Search, Run, Compile, Debug, Project, Options, Window, and Help. The code editor contains the following code:

```
# include<stdio.h>
int main(){
printf("hell");
return 0;
}
```

The status bar at the bottom shows "1:1" and a cursor. The bottom-most status bar displays function key shortcuts: F1 Help, F2 Save, F3 Open, Alt-F9 Compile, F9 Make, and F10 Menu.

Code::Blocks Tutorial

Introduction

What is Code::Blocks

- Code::Blocks is a cross-platform IDE (Integrated Development Environment) for programming in C and C++.
- It's an Open-Source IDE which has been around over 10 years and has been crowd-sourced by an open community and brought to its original face which is today.
- It is compiled with TDM GCC 5.12 (for the 17.12 latest version)
- It's a great beginner's toolkit to learning programming.

Installing Code::Blocks

- Install code-blocks from <http://www.codeblocks.org/downloads/26>
- Install any version you like but be sure to choose the MINGW version unless you are already an expert person like me :P
- After installing on first screen associate every file possible to code::blocks when it asks you.
- Snoop around a bit to get yourself familiar of the software

[Wiki](#)

Please select a setup package depending on your platform:

- Windows XP / Vista / 7 / 8.x / 10
- Linux 32 and 64-bit
- Mac OS X

NOTE: For older OS'es use older releases. There are releases for many OS version and platforms on the [Sourceforge.net](https://sourceforge.net/projects/openssl/) page.

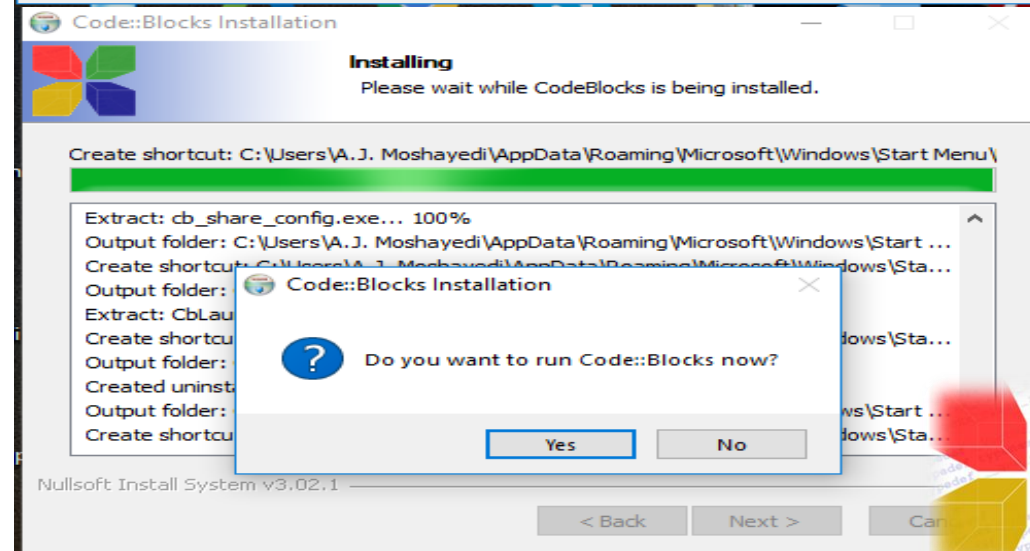

NOTE: There are also more recent *nightly builds* available in the [forums](#) or (for Debian and Fedora users) in [Jens' Debian repository](#) and [Jens' Fedora repository](#). Please note that we consider *nightly builds* to be *stable*, usually.

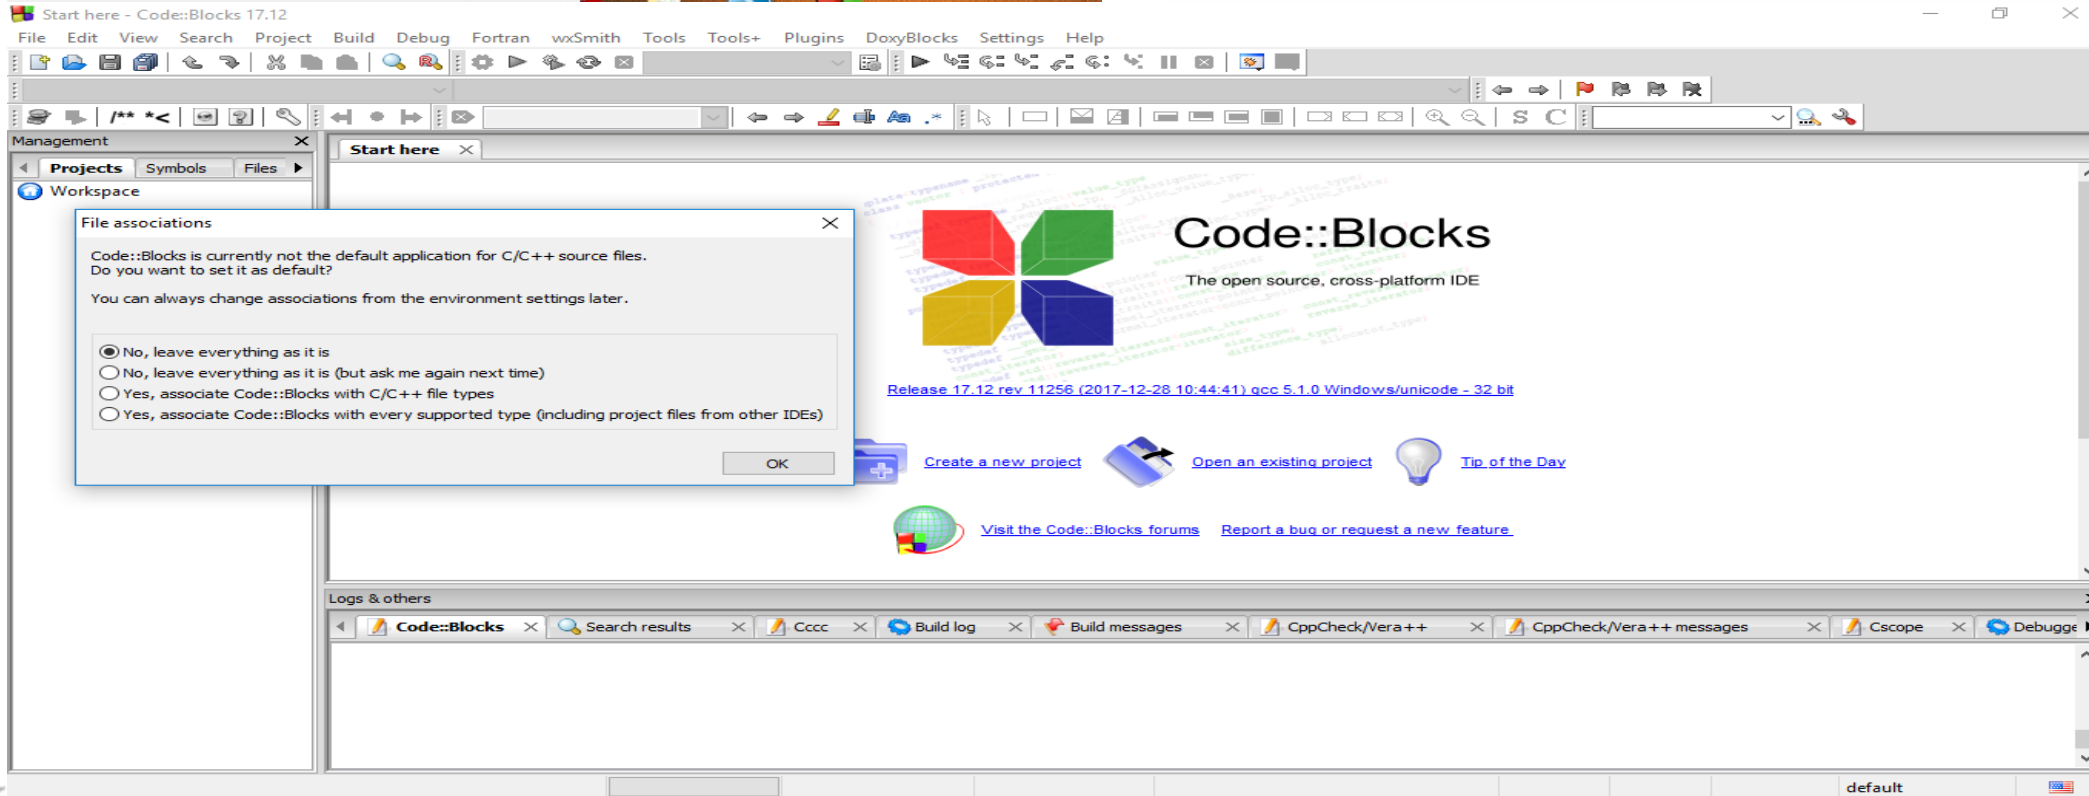

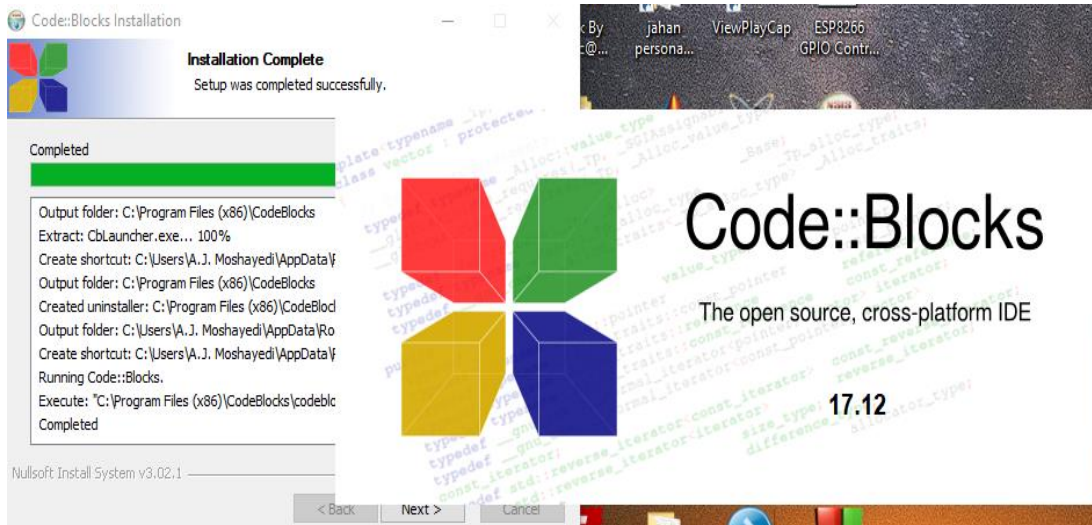

NOTE: We have a [Changelog for 17.12](#), that gives you an overview over the enhancements and fixes we have put in the new release.

Windows XP / Vista / 7 / 8.x / 10:

File	Date	Download from
codeblocks-17.12-setup.exe	30 Dec 2017	Sourceforge.net
codeblocks-17.12-setup-nonadmin.exe	30 Dec 2017	Sourceforge.net
codeblocks-17.12-nosetup.zip	30 Dec 2017	Sourceforge.net
codeblocks-17.12mingw-setup.exe	30 Dec 2017	Sourceforge.net

Compilers auto-detection

Note: After auto-detection, at least one compiler's master path is still empty and therefore invalid. Inspect the list below and change the compiler's master path later in the compiler options. Select your favourite default compiler here:

Compiler	Status	Set as default
GNU GCC Compiler	Not found	
Microsoft Visual C++ Toolkit 2003	Not found	
Microsoft Visual C++ 2005/2008	Not found	
Microsoft Visual C++ 2010	Not found	
Borland C++ Compiler (5.5, 5.82)	Not found	
Digital Mars Compiler	Not found	
OpenWatcom (W32) Compiler	Not found	
Cygwin GCC	Not found	
LCC Compiler	Not found	
Intel C/C++ Compiler	Not found	
Small Device C Compiler	Not found	
Tiny C Compiler	Not found	

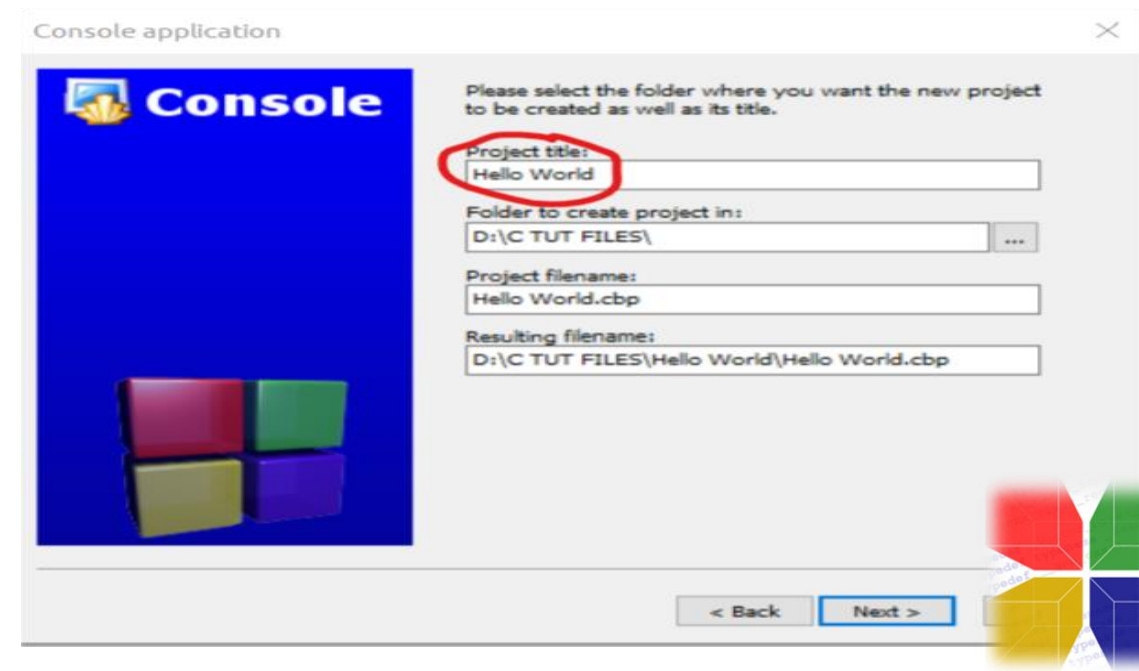

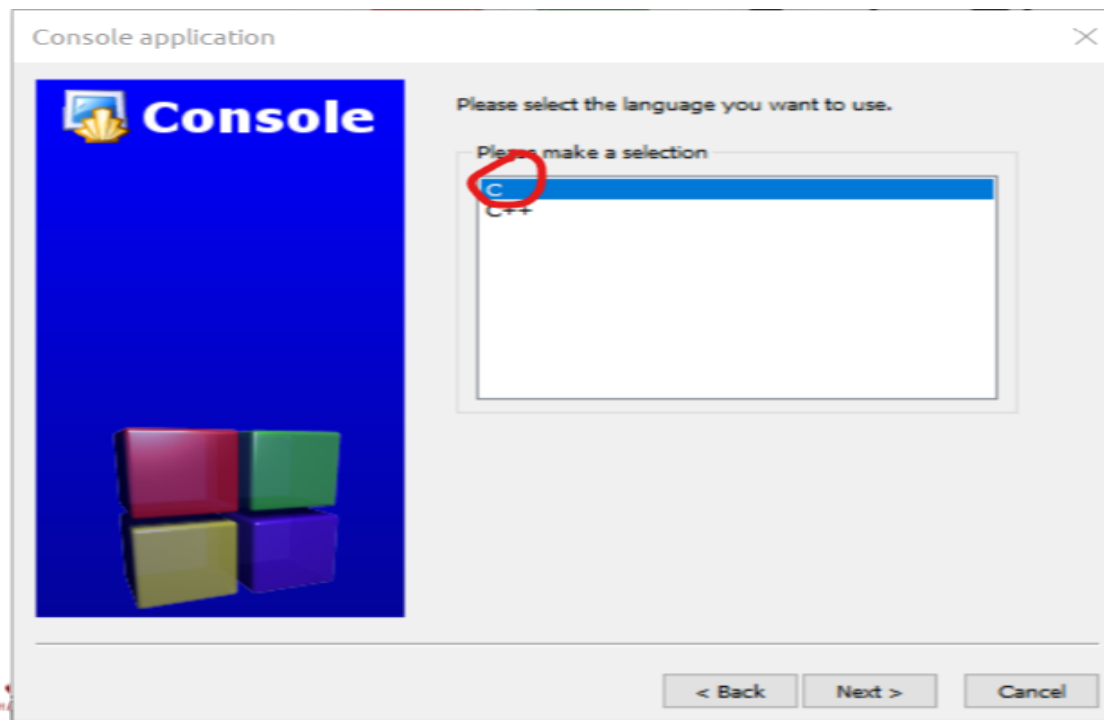

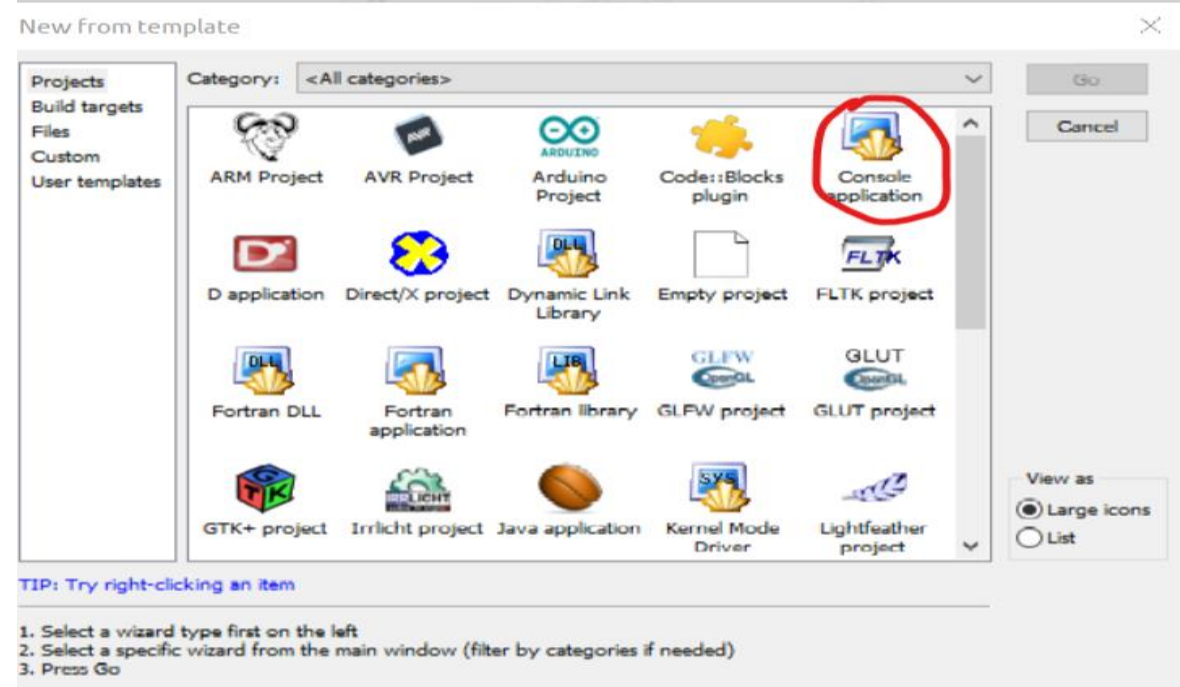

Current default compiler: GNU GCC Compiler

Code::Blocks

How To Compile And Run A Program

Hello World!!!

Run Code Blocks

- In the previous PPT we saw how to download and install Code::Blocks
- Now, in this lesson we will run our first program
- In ever tutorial of the world of any programming language hello world program is the first program anyone ever learns.
- Here its no different
- So lets jump into it

Source Code

```
1  #include <stdio.h>
2  #include <stdlib.h>
3
4  int main()
5  {
6      printf("Hello world!\n");
7      return 0;
8  }
9
```

Here, the first two lines is called the pre-processor directive meaning they are the library containing all the instructions that the processor needs to run the actual program

Next is the starting of the main function (line 4)

Then, we write printf which is a function inside the main function which commands the machine to print out to console whatever follows afterwards according to pre-programmed parameters

After typing the code press F9 or
CTRL+F10 to Build and then
CTRL+F9 to Run

Once you do that it will print out the following output in the console:

```
Hello World!!
```

We can even design it a bit with ASCII Character inside the double quoted
string placeholders
and print it as follows:

```
*****HELLOW WORLD*****
```

```
Process returned 0 (0x0)   execution time : 0.016 s  
Press any key to continue.
```

Trial Program

```
main.c X
1  #include <stdio.h>
2  #include <stdlib.h>
3  #define ENDVALUE 50
4
5  int main()
6  {
7      int celsius;
8      float fahrenheit;
9      //display the heading lines
10     printf("DEGREES DEGREES\n");
11     printf("CELSIUS FAHRENHEIT\n");
12     printf("-----\n");
13     //now fill in the table using a while loop
14     celsius=5; /*starting celsius value*/
15     while (celsius<=ENDVALUE){
16         fahrenheit=(9.0/5.0)*celsius+32.0;
17         printf("%5d %11.2f \n", celsius, fahrenheit);
18         celsius=celsius+5;
19     }
20     return 0;
21 }
22
```

```
#include <stdio.h>
#include <stdlib.h>
#define ENDVALUE 50
```

```
int main()
```

```
{
```

```
    int celsius;
```

```
    float fahren;
```

```
    //display the heading line
```

```
    printf("DEGREES DEGREES\n");
```

```
    printf("CELSIUS FAHRENHEIT\n");
```

```
    printf("-----\n");
```

```
    //now fill in the table with values
```

```
    celsius=5; /*starting celsius value*/
```

```
    while (celsius<=ENDVALUE)
```

```
    {
        fahren=(9.0/5.0)*celsius+32;
```

```
        printf("%5d %11.2f \n", celsius, fahren);
```

```
        celsius=celsius+5;
```

```
    }
```

```
    return 0;
```

```
}
```

"D:\C TUT FILES\practice1024\bin\Debug\practice1024.exe"

```
DEGREES DEGREES
CELSIUS FAHRENHEIT
```

```
-----
5      41.00

code blocks can't find my compiler

- sometimes It may have happened that you have below error

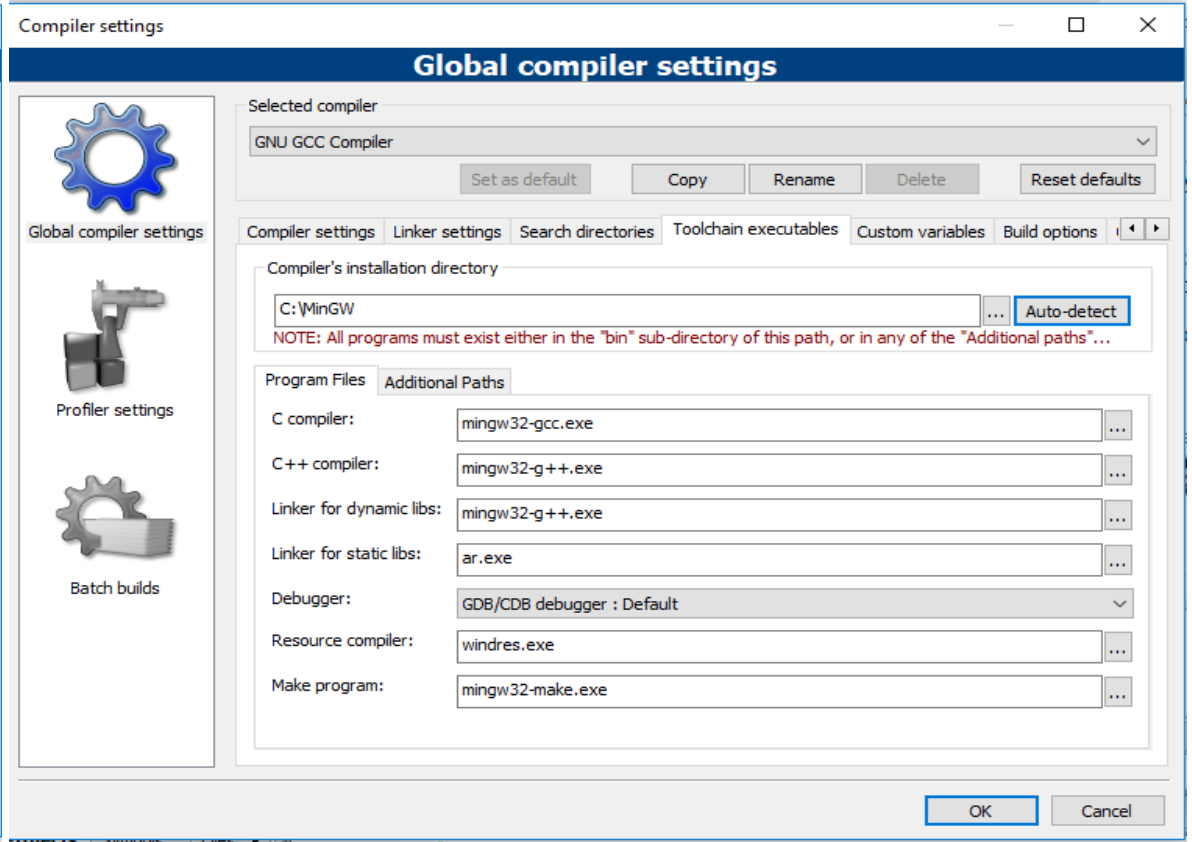

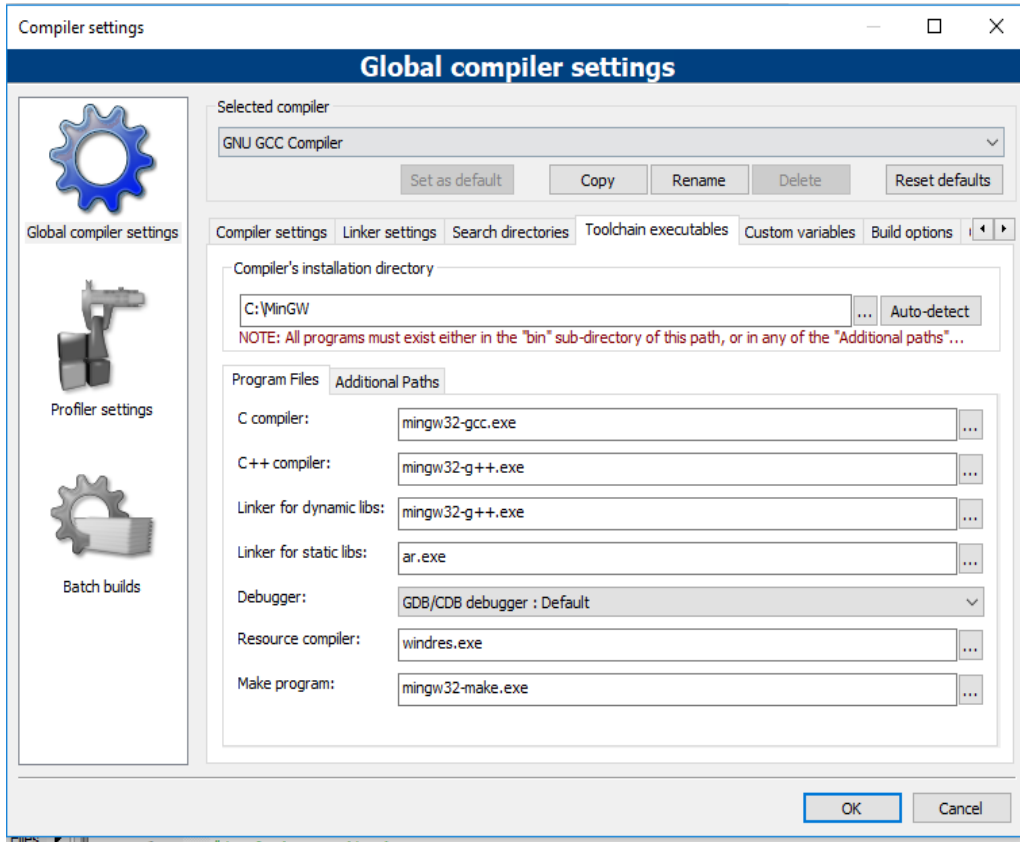

```
Project/Target: "salam - Debug":  
  The compiler's setup (GNU GCC Compiler) is invalid, so Code::Blocks cannot find/run the compiler.  
  Probably the toolchain path within the compiler options is not setup correctly?!  
  Do you have a compiler installed?  
Goto "Settings->Compiler...->Global compiler settings->GNU GCC Compiler->Toolchain executables" and fix the compiler's setup.  
  
Tried to run compiler executable 'C:\Program Files (x86)\CodeBlocks\bin\mingw32-gcc.exe', but failed!  
  
Run aborted...
```

- To solve this problem
- First be sure that from
- <http://www.codeblocks.org/downloads/26>
- Download the
- codeblocks-17.12mingw_fortran-setup.exe

 Windows XP / Vista / 7 / 8.x / 10:

File	Date	Download from
codeblocks-17.12-setup.exe	30 Dec 2017	FossHUB or Sourceforge.net
codeblocks-17.12-setup-nonadmin.exe	30 Dec 2017	FossHUB or Sourceforge.net
codeblocks-17.12-nosetup.zip	30 Dec 2017	FossHUB or Sourceforge.net
codeblocks-17.12mingw-setup.exe	30 Dec 2017	FossHUB or Sourceforge.net
codeblocks-17.12mingw-nosetup.zip	30 Dec 2017	FossHUB or Sourceforge.net
codeblocks-17.12mingw_fortran-setup.exe	30 Dec 2017	FossHUB or Sourceforge.net

- Then go to **Settings>Global compiler settings>Toolchain executables(tab)** and see the *Compiler's installation directory*, it may be set by default to **C:\MinGW** something like that.
- Just press the **Auto-detect** button and it will find the actual directory of the compiler.
- Click **OK** and you are ready to *Code!*
